

Kalneerat Kanghom ***(mint)***

Birth 02/may/1995

26 years

"I think architect has identity and their thinking process. Everyone presents their believed. If we starting with the same problem, nothing be the same. It depends on experience, experimentation, passion, motivation or knowledge. All these things will make valuable of themselves, context, user even architect."

Education

(1999 - 2007) Primary School :

Wat Mahaphuttaram School

(2007 – 2013) Secondary School :

Saipanya School Under the Royal Patronage of Her Majesty the Queen

(2013 – 2018) Bachelor's Degree of the Faculty of Architecture and Design :

King Mongkut's University of Technology North Bangkok

I was studied in architecture since 2013. I have attended university events, including ASA booths (ASA Guide), Smart City competition which one of our university teams went to the next round, DNA (design by North Bangkok Architecture) it was a thesis exhibition. When I was fourth-year, I had applied to IAESTE Thailand test at the university to internship abroad. So, I passed the exam and entered to interviews, which I was a first substitute. Unfortunately, the opportunity was not mine. They needed just only one person for architect internship. Therefore, I had to do an internship in Thailand. And I went to North Forrest Studio at Chaingmai. That I would like to get idea of architectural with natural, the truth of materials, local methods, traditional of architecture or senses of architecture. What I received was great spiritual value. The warmth of the workplace, knowledge even went to volunteer work with my friends. I lived there alone for two months. It was a great experience for me.

Experience

(May 2018 - Jan 2019) PMNB Synergy (Consulting Management Office)

Position: Site Architect and Admin

I was started working on May 2018. My position was an architect and still a temporary admin at PMNB Synergy. At first, I worked at the river garden hotel as a renovation hotel project. Then they moved me to the SM Tower to worked as architect and admin there too. The project is about renovation too. it was a Thai Union's Global Innovation Center. I worked with a senior architect to help him approved material, followed work progressing at site and attended every meeting with the employer and architect that made me awareness to the problems and errors.

Architect License :

Associate Architect

Assoc. Arch 23231

And then the company has a new project at Kamphaeng Saen, it was a low-rise condominium, which the Triple Nine Architect. This project was beginning. I worked with a senior architect and my boss, followed work progressing of conceptual design, building permission, bidding process and attended every meeting with the employer and architect. In that times I was seem like a secretary of my boss. He took me to everywhere that he's went to. And he taught me about the step of the project. It was a good experience for me to learned about new things.

(Feb 2019 - Mar 2021) Freelance Architect

I was a freelance architect for two years. I have worked every process about architecture, talking to owner's requirements, criteria, conceptual design until submission drawing process completed. Every process needed times and have to pay attention.

Pathum House, the architecture was combines Thai style and contemporary. And we used brick, concrete and wood as the main materials. Front of house was connected with Chao Phraya River. The river side was a living area because the owner spends most time in this room. Coco's Cafe was a new building nearby the old. They were a triangular area as a highlight of the three ways junction. Therefore, I was placing the buildings along the road, in order to attraction. House 111, the owner needed one-floor house because of the elderly. So, the main concept of this project was a sharing public space in a house. Which the private zone has a place to relax in own area. Therefore, I splitted up private function and used axis circulation are connected the function. And the middle spaces were public function. House no.9 was a little house. The public zone was middle, and the private zone is divided on the side of the building. I also added a long line of mirrors around the house to open up the view from inside. House 618 is an addition house from the old house. But the whole structure is not connected to the old house. The owner needed every space were used, even the roof top. Beside house was connected with the canal and garden. So, I kept this side for terrace and open space. It was a really good view. House no.64, they were club house and connected to main house. it's was behind. This building for owner living, reception and party. The function pattern was linear, public to private. This project was difficult because space was limited and the owner had built a pool before. And the owner always has new ideas about design, especially interior design. It was a different from our first frame work.

Since I was worked as architect, I have learned that everything had process and condition according to conceptual design, owner's requirements, surrounding context, criteria, budget, space was limited or material selection. That they have difference element which is unique in itself. Therefore, architect had to resolve that solutions and limitations, and presented as architecture.
