Elderly Sport Complex & Knowledge Center

Thesis (2019)

The intention of this study is to design an architecture for elderly in city context. The architecture was designed to solve an elderly crisis in Bangkok. Instead of design a nursery center for elderly, I try to give elderly alternate choices of activities in a day. The architecture was designed to be a place where they can spend time at day working out to keep themselves healthy, improving their knowledge, being active and socialize. All of activities can prevent them from aging diseases. The architecture is mainly consisted of life quality improvement related programs such as a fitness gym, a sport hall, a spa, a workshop center and a cooking school.

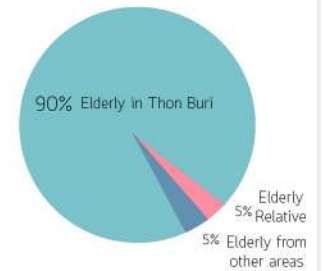

● SITE : Thon Buri, Bangkok

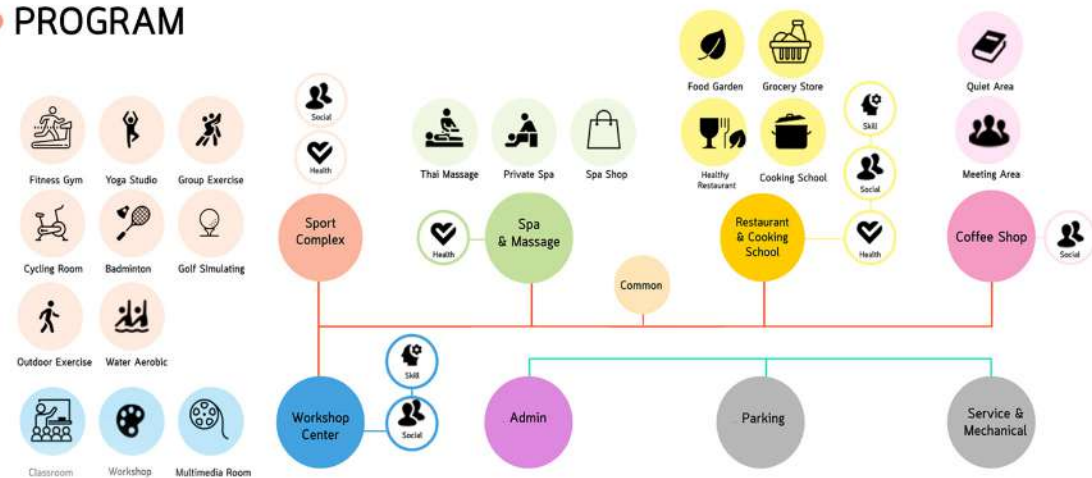

● USER

Main Users are elderly aged between 60 - 70 years

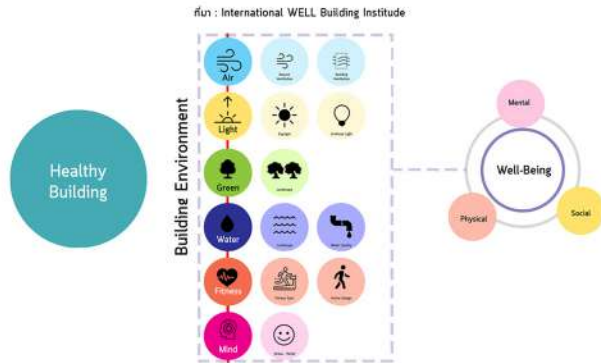

● PROGRAM

CONCEPT : HEALTHY BUILDING

Referred to WELL Building Institute. The healthy building is the building which promote healthy behaviors of building users by activities inside building, environment and and designed elements of architecture

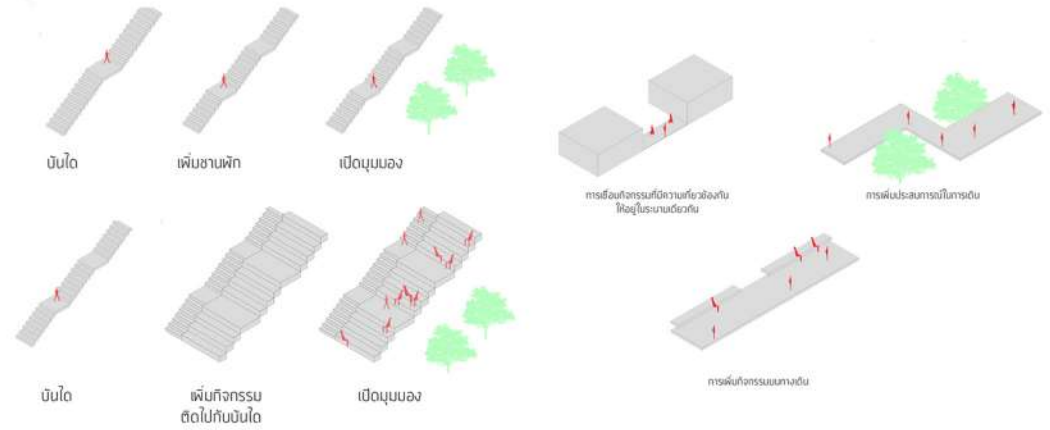

Light ↑
Designed natural light can keep elderly active and safe

Fitness

Promote physical activities. The elderly can work out through elements of architecture such as stairs and corridors

Green

Provide green space in site. Green space can be used for relaxation and creating socialize space

Air

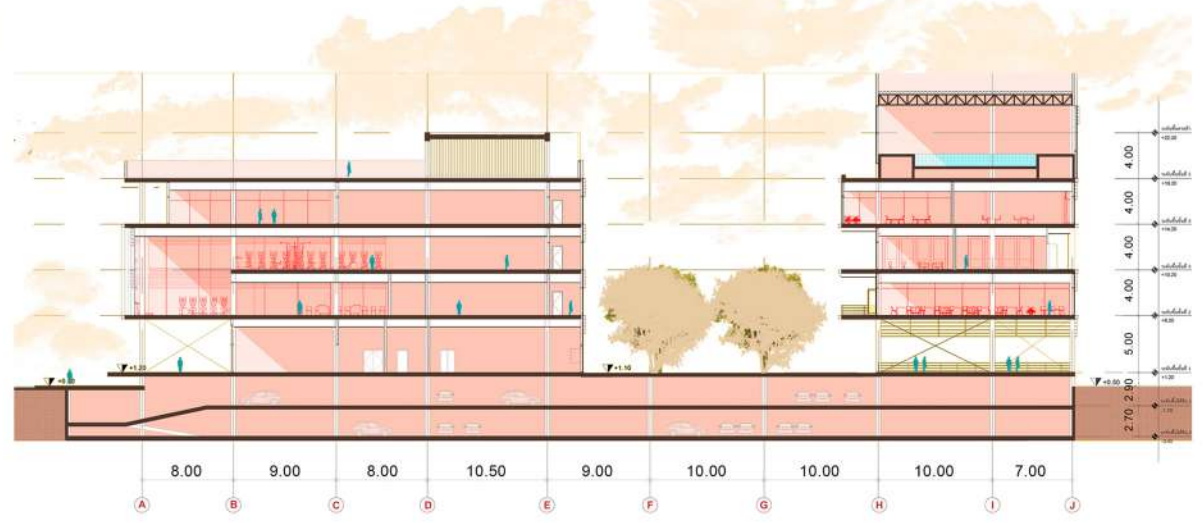

Provide good air quality and good ventilation

Bangkok Sky Tree

Mixed-Use High Rise (2018)

Bangkok Sky Tree is a mixed-use high rise located in Asok consisted of a shopping mall and ballrooms as a podium. Offices and residential unit as a tower along with other facility such as fitness, swimming pool, roof top restaurant

view

Every units can take a city view.

Stack units up and connect with the core but the core surrounded by the unit is dark and dense

Reduce the number of units / Subtract the mass to bring natural light to the core

Subtract the core into 4 pieces to treat the central space as semi-outdoor space with natural light and ventilation

The cores of building was designed to located in a middle of building so every units can take a city view. The cores are divided into 4 cores for different function zone. The cores structures are also treated as a sculpture making building's mass looks more iconic.

03

S4 Community Mall

Community Mall (2017)

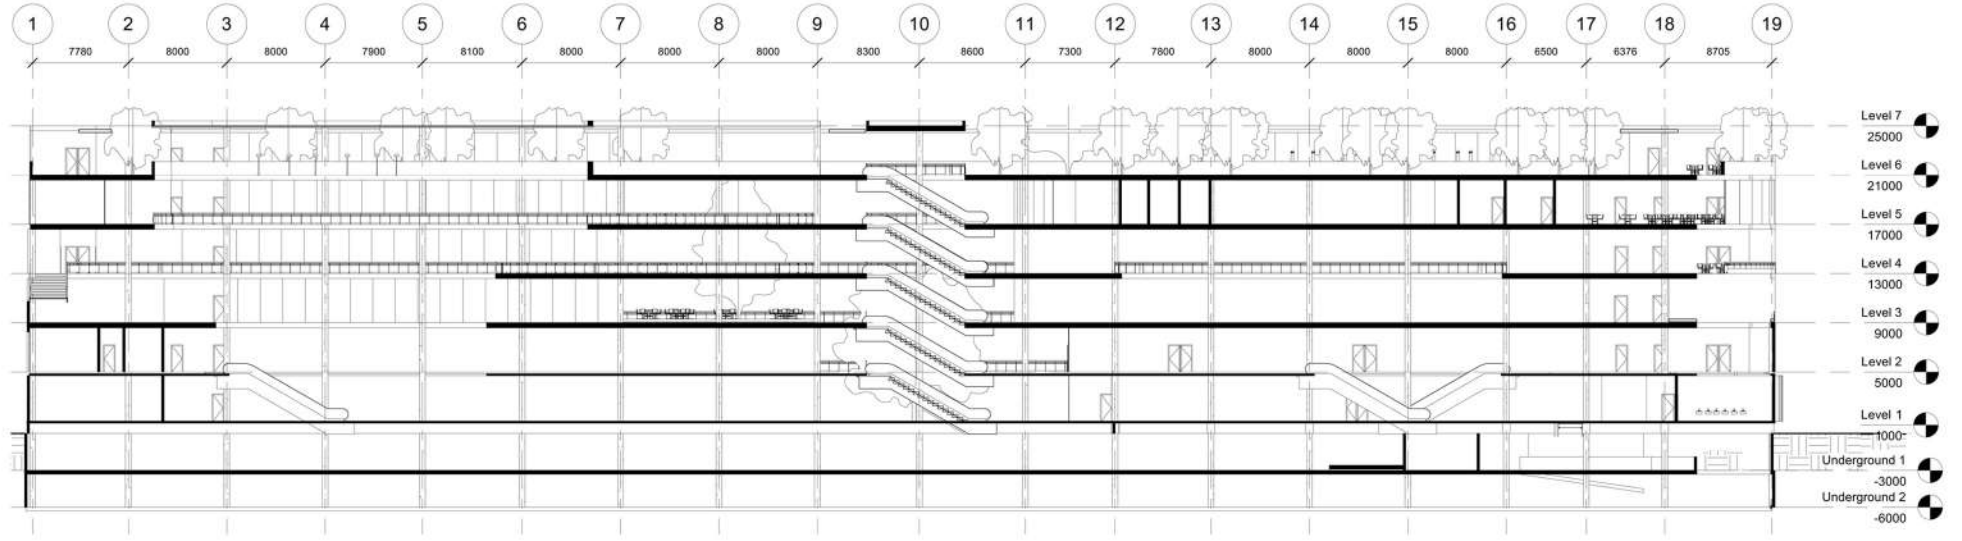

S4 community mall is located in Sathorn. The owner wants S4 to be iconic community mall for people who travel by. The shopping mall is connected to Sathorn BTS station directly so people can easily access from the station. The community mall was divided into three zones. Supermarket on the ground floor. Shopping Mall on the third floor (can be accessed from BTS) and Rooftop Restaurant. It was divided by the open - close time so these zones can be opened and closed at different time which can keep community mall active from morning until midnight

Magic Land Kindergarten School

Kindergarten School (2016)

The project site used to be an amusement park called "Dan Neramit" with an old existing castle. The architecture was design by using a surrounded space as a main circulation. Children tend to move more freely in a surrounded space like a courtyard while teachers can observe children more easily than using linear corridors. The courtyard can also use as a space to hold some activities for children. The architecture massing was designed referred to how children draw a house with a rectangle and a triangle. It turned out to be a group of modern barn house buildings.

Every groups of functions have their own pocket courtyard which can connected to a main court

05 Redesigned Bangpu Bridge

Landscape Design

The project objective is redesigning Bangpu bridge to solve existing problems. Bangpu is very well known for its bird feeding point. The problem is an overlap of people, birds and cars circulation which usually endangers birds. The problem can be solve by designing the bridge. Organizing circulations to prevent them from crossing each others. Preparing a space for bird feeding can keep birds in safe area and also can change their behaviors. The bridge is also designed as a new park for people nearby which contains a lot of pocket garden space while people can still fully observe a view of Bangpu like they used to.

3 COURTYARDS HOUSE

SMALL HOUSE (2015)

"3 Courtyards House" is a house for 1 user. it consists of 1 bedroom, 1 living room, 1 kitchen and 1 bathroom. Starting by forming required area. then I decided to shift the mass to embrace outdoor spaces. The courtyard itself connect masses together. A rythm of indoor & outdoor spaces brings natural light and ventilation into a house. The Courtyards' privacy is vary from a public entrance court to a private inner court. A user can take view of green inner court by any room in a house.
