Project of a new bakery

## **Filippo Tresoldi Architect**

In 2002 I graduated from the Milano Polytechnic in Architecture (Master of Science), and was awarded for “best thesis project 2002” by the Order of architects and landscape designers of the province of Milan.

I worked and cooperated with various architectural firms for many years, earning Project Manager title, for both national and international projects, in residential, commercial and hospitality fields.

In 2011 I decided to open my own office.

The office provide building design and drafting services in the beautiful region between Como lake and Garda Lake, close to Milan. Based on a 16 year of experience, the office now is able to direct an extensive array of national and international projects of various scales, running from urban masterplans to public and private buildings. The practice work is characterised by meticulous attention to the concept and details of every project, and relentless focus on refining design ideas to arrive at a solution which is architecturally, socially, and intellectually coherent.

### **Knowledge and skills**

Ability to use Bim software Archicad (Graphisoft company), Adobe Photoshop, Microsoft excel, Microsoft PowerPoint.

Design development (from the approved sketch plans to detailed construction drawings).

Construction phase control, management of the economic budget trademark registration.

Strong knowledge of design, trends, construction methodology and manufacturer supplier.

Ability to manage multiple projects.
