Looking For *Structural Design Engineer*

EXPERIENCES

I have been in a site civil engineer for 8 months. I have ever passed either architect works or structure works. I know how to basically manage and control workers to construct even so I have to learn a lot of things in site construction from who has experiences .

NEXT . . .

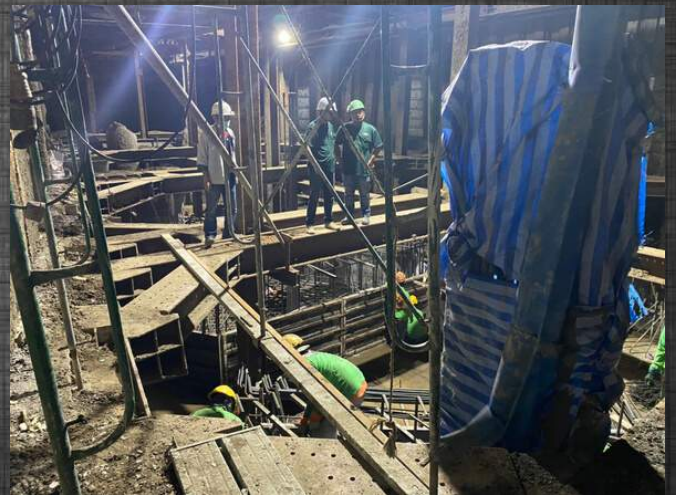

I construct following shop drawing several times, I always have questions about how to design this structure. So, I would like to become a "Structural Design Engineer" because I want to use my knowledge and learn everythings from who has experiences to improve myself and develop the company.

- Control Structure Construction
- Create Bar Cut List for Rebar making
- Manage Rebar sequence before put it in order that rebar will place in correct layers
- Prepare request and report daily for explaining to Consult Management
- Prepare Inspection Testing Concrete Document before cement structure to Consult Management
- Calculate quantity of materials includes concrete , coupler rebar connection , formwork and swelling waterstop
